

Exposure of inadmissible-evidence settlements that clear (\$200 per defective settlement; permissive baseline vs RAILS)

anchors: avg chargeback ~110US/120 travel; card fraud 6.43c per 100 (Nilson2026); dispute cost 9-10 (Mastercard 2025). Approval-impact pairing: this permissive baseline declines only 2% of legitimate work but carries the exposure above; RAILS' fixed-ATT floor over-declines, which the exposure-variable floor recovers (fig_variable_floor). Baseline is a current flagship (mistral-large-latest); the most-permissive judge measured (gemini-2.5-flash, 97%) sits even higher. Population: the inadmissible-evidence (sub_floor) slice; loss model: flat \$200 per cleared defective.
